

Choose your mop system...

400g Kentucky Mop

For the Kentucky mop user there is a simple choice between our traditional Monsoon loop and web mop and our recently introduced Bactiguard model. The standard Monsoon is a high performance specification with a blend of yarns providing well above average

Bactiguard

liquid absorption and exceptional durability. Where you will find our very different is in the Bactiguard mop specification offering our 400g loop and web Kentucky mop manufactured entirely from an anti-bactericidal yarn that will not support bacteria and can be washed again and again without loss of anti-bactericidal properties.

Standard
627210

This is just another major step in improving cleaning standards.

MS1

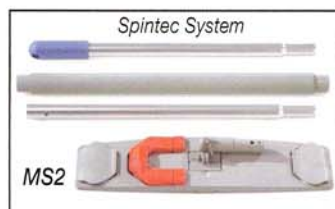

The Numatic 40cm Spintec hang on Flat Mop System

The exclusive Numatic Spintec system uses a simple, patented, hanging mop design which is easy to use and is self-tensioning in use, keeping an essential good tight fit between mop and mop holder and with an additional 33% more floor contact.

When using the "Spintec hang on" system, mops remain hanging on the mop holder when being rinsed and pressed, followed by a simple spin opening action which is so much quicker and user friendly.

Our Spintec hang on system is available in all 4 mop specifications: Loop, Microfibre Loop, Microfibre and Microfibre Deep Clean. All models can be used with our Flat mop kits MS2 or MS3.

Two standard Mop Kits are available, a three piece mop stick or single telescopic mop stick.

Loop Spintec hang on

The Slalom 40cm Loop Mop

A fast and controlled mopping system with good cleaning characteristics, dirt absorption and water retention. Available in two styles, the standard pocket mop or our own unique, 33% larger, self-tensioning, Spintec hanging design that allows hands free operation, consistent results and exceptional user convenience.
