

# ServoTwin ST2416

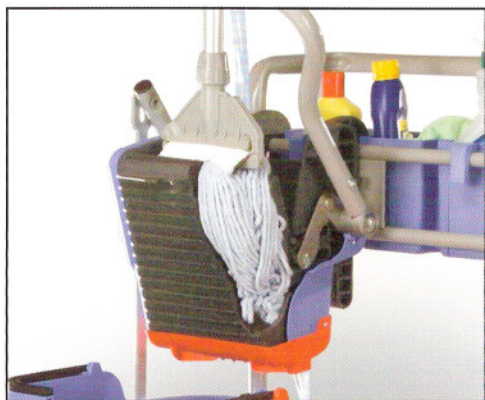

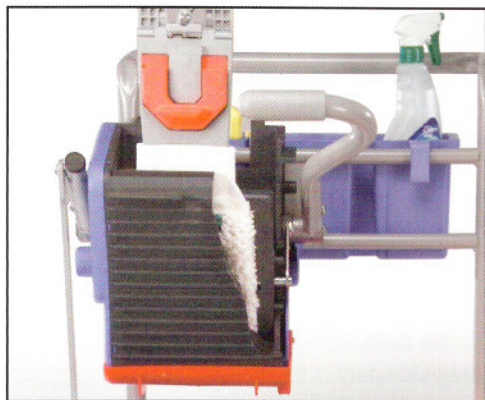

The Servotwin model embodies two of the most advanced mopping features available, being both our unique patented AWS (Automatic Water Separation) system and twin foot and hand operation.

The 2416 is a genuine two bucket system - but you only work from one generous 24-litre clean water bucket, with the second 16-litre pail simply collecting the dirty water automatically. It is not only brilliant - it is really so quick and easy to use, to fill and to empty.

The Structofoam chassis provides exceptional strength and excellent mobility and the All-Mops Press allows use with the full range of Kentucky, Flat and Microfibre mops.

The dual Foot and Hand operation literally halves the operational effort, sharing the press operation between both the foot and the hand... an exceptionally valuable feature for anybody working extended hours, but a real boon for any user.

The ST-2416 incorporates a very useful handle mounted caddy, providing somewhere to put those always needed cloths, dusters, sprays etc.

ST2416W

ST2416

The ST-2416W is also available with an additional full 30-litre lidded waste system, enlarged top caddy and added 5-litre pail - in fact, everything that you might need.

*A better mopping system would be hard to find.*

Model	Mop Kit	Capacity Clean	Capacity Dirty	Waste Capacity	Caddy	Pail	Castors	Size
ST2416	JT3 -	24L	16L	-	4L	-	4 x 75mm	710 x 600 x 880mm
ST2416W	24/16L	24L	16L	30L	10L	5L	4 x 75mm	880 x 600 x 970mm
